D.R.I.P.S, LLC.

THE FASTEST FLOOD AND PROPERTY LOSS PREVENTION SYSTEM
IN THIS PRESENTATION WE WILL DISCUSS FOUR MAIN POINTS

1. WHAT IS D.R.I.P.S, LLC. & BIG BAGS USA?
2. HOW THE SYSTEMS WE PROVIDE WORK.
3. OTHER PRODUCTS ON THE MARKET.
4. COMMONLY ASKED QUESTIONS.
DISASTER RELIEF & INNOVATIVE PROTECTION SYSTEMS, LLC.
D.R.I.P.S, LLC. – is a Limited Liability Company headquartered out of Saint Louis, Missouri which is located right in the middle of the Mississippi River Basin.
D.R.I.P.S, LLC. is dedicated to assisting in preventing flood damage and property loss across North America.
We work co-operatively with *Private, Civic and Government Agencies* in the matter of loss prevention.
We also work closely with Emergency Management Engineers, Public Works Directors and Contractors, both Public and Private in your area to help in the deployment strategy for optimal results.
BIG BAGS USA is a Barrier System that redefines the term “Rapid Flood Deployment”
Big Bags system’s simple design make it both light weight and durable.
For all of us at DRIPS, LLC and BIG BAGS USA our main objective is to assist communities and individuals in times of need. We would like to assist you in the pre-flood time frames to help minimize property damage, as well as, research and develop new methods for helping flood victims, their families, and the surrounding communities.
In specific, communities that are prone to flooding in the past will be presented with a new method of containing rising water, in a very fast and economical way, by storing BIG BAGS in strategic locations in your flood prone areas.

These BIG BAGS systems will be located near public works facilities, property owners, or even city municipality buildings and can be pulled out and set up when the flood waters rise.

We will help protect you and your communities' property, giving you the comfort of knowing that you have protection in place prior to the flood waters reaching your property.

We will demonstrate to the Insurance Industry that you are doing all that you can to mitigate the damages to your property, which means you are taking the best possible steps to minimize or avoid damages attributable to water damage.
What Are Big Bags USA? & How Do They Work?
Every 60 lbs. (27kg) System consists of 5 strong reinforced bags, each capable of holding 4400 lbs. (1990kg) each.
Each system is hand built out of high quality materials.
This enables rapid deployment in bulk quantity with minimal man power.
Shown here are 5 Big Bags systems that are ready to be filled. These units total 75 linear feet (22.8m) and were deployed in less than 7 minutes.
Once the systems are deployed, there are a variety of ways to fill the bags. Using a Front End Loader can fill 2-3 bags at once.
For a fast deployment along roadways, one man can guide a chute from a cement mixer, filling each bag with a sand solution in only 2 min.
For more difficult areas a concrete conveyor truck can hit distances over 400 ft. (122m). Filling the bags in less than 45 seconds.
Every system is stackable. A proper pyramid configuration is capable of being stacked to any desired height.
Each filled system can be lifted with a spreader bar and crane.
How Does Big Bags USA Stack Up To The Competition?
Conventional Sand Bags

Labor Intensive  Time Consuming
Big Bags USA has a shelf life of 50 years. The tightly woven polypropylene weave ensures the highest amount of hydro UV-Protection.
Fighting Water with Water?
Aqua barriers, if punctured, offer little defense against debris in flood waters.
Height Restrictions

Only one system can be utilized at a time. Big Bags USA systems, you tailor fit your barrier based on the given need.
Similar Products On The Market
While there are products on the market that use a similar techniques. There are some key differences.
1.) Our system has a bottom for optimal barrier integrity against erosion.
2.) If your work force is not properly trained, barrier failure is possible.
What are some commonly asked questions about Big Bags USA?
What are the advantages of the Big Bags USA systems?

- There are many advantages of these systems. The main advantage is the lack of labor involved with assembly and filling. The second advantage is the speed with which you can protect an area from flooding. The third would be the cost savings compared to any other flood protection product available.
Are these systems stackable?

- Yes, these systems can be stacked, and it is recommended that you stack them like a pyramid. If you were trying to fight 10 feet of flood water, then you would need to stack the systems 4 layers tall. The base of the barrier should also be 4 layers wide.
Can you re-use these systems?

The answer is yes, however, it may be more cost effective to just buy more systems instead of cleaning, re-assembling, and then storing them. The bags are tough enough for more than one use.
How big is one system?

- One system is equal to 15 linear feet by 3 feet tall (4.5m X .9m).
When filled with sand, how much does one bag weigh?

- Anywhere from 2,800 lbs - 3200 lbs (1267kg – 1448kg), depending on the wetness of the sand.
How long does it take for delivery?

- It depends on the size of the order, but typically it will take 5 to 7 business days to be delivered to your destination.
Who are our competitors?

- There are other barrier manufacturers out there that actually work, but please consider:
  1) Cost Comparison
  2) Speed of Deployment.
  3) Speed of Removal
  4) Investment Return on Uncontaminated Sand.
What do you do with the bags when the flood waters are gone?

- There are many options after the flood waters recede. Depending on how often your community floods, should determine if you want to keep the sand in the bags for later use. Once these bags are filled and broken apart from the rest of the system, they can be placed on pallets and stacked outside. When the next time you need to use them they will already be filled. You can also use these to cover man hole covers and sewer drains.
Thank You!

For

Considering D.R.I.P.S LLC
OUR PATENTED BIG BAGS SYSTEMS ARE MANUFACTURED IN MISSOURI, AND CAN SAVE YOUR PROPERTY AT LEAST 100 TIMES FASTER THAN THE BACK BREAKING, LABOR INTENSIVE, REGULAR SANDBAGS.

LET THE MACHINES DO ALL THE BACK BREAKING WORK FOR YOU. OUR BIG BAGS SYSTEMS ARE VERY SIMPLE TO USE AND COST EFFECTIVE WHEN COMPAREING TO THE ALTERNATIVES.
